User Manual

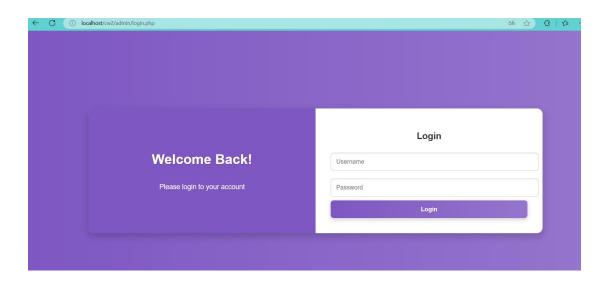

Introduction System

The British Transport Police website is an important tool for law enforcement, storing detailed information about vehicles, individuals, crimes and reports. It enables officers to log in, change passwords, search for individuals or vehicles, add new vehicle records, file and access reports, issue fines and maintain an audit trail of financial accountability.

Usage

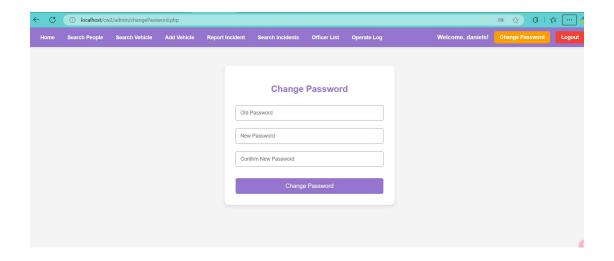

1. (Officer or Admin) Login

Users must log in with a valid username and password. The default login is "daniels" for the username and "copper99" for the password, but users should change their password for enhanced security upon first use.

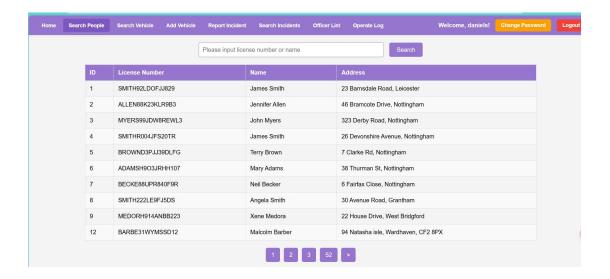

2. Change Password

To update your password, click the "Modify Password" button, verify your current password, and then enter a new one that meets security standards.

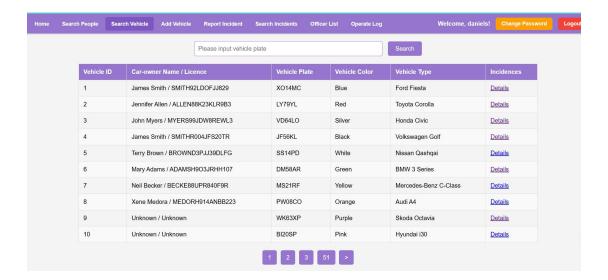

3. Search People

By clicking the "Search People" button in the top menu bar, you will be directed to this page where you can search for an individual's information by entering either their license number or name. Once the search is initiated, the system will retrieve the corresponding record and display it in a table format.

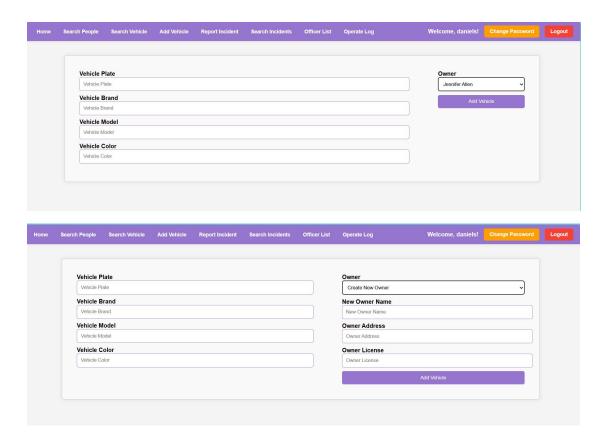

4. Search Vehicle

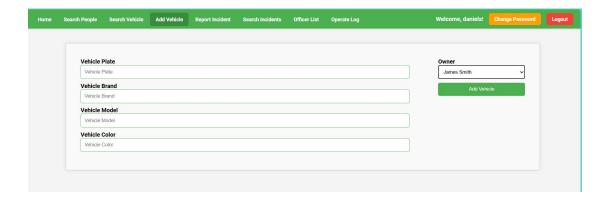

Clicking "Search Vehicle" in the top menu redirects to the vehicle search page. Enter the vehicle number to view details like registration, make, and model. On the right, a "Details" link provides access to the vehicle's historical events, including offences, accidents, and fines.

5. Add Vehicle

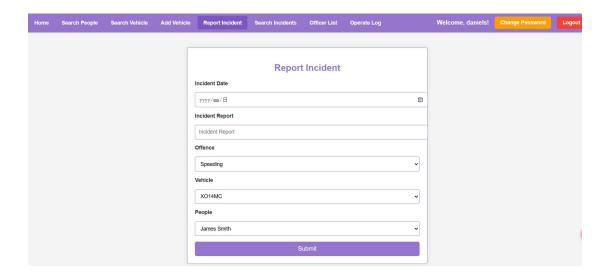

Adding a new vehicle by clicking "Add Vehicle", entering details such as number, make, model, color and registration and submitting the form. Assign an existing driver via a drop-down list or create a new driver using their name, address and license, linking them to the vehicle for organized data management.

6. Report Incident

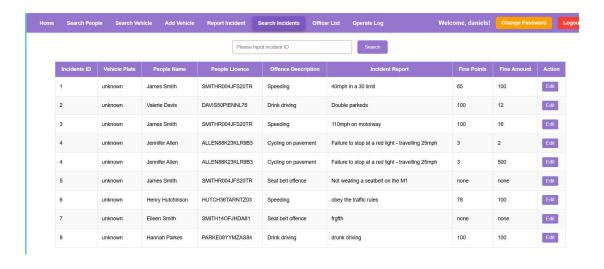

On the Report Incident page, officers can efficiently record an incident by entering key details such as date, report, crime, vehicle and person. Click Submit to save the report and link it to relevant entities, keeping your data organized and easy to review later.

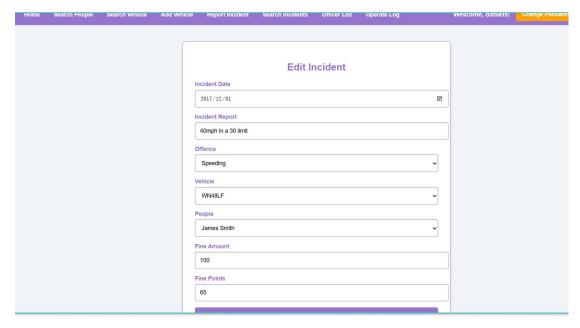

7. Search Incident

On the Search Incidents page, users can search for specific incidents by entering criteria such as the incident ID. The system retrieves and displays matching incidents in a table, including details like the vehicle plate, people involved, offence description, fine points, and amounts. Each record includes an "Edit" button, only allowing authorized administrators to update incident details, such as modifying descriptions or setting fines, but ordinary police

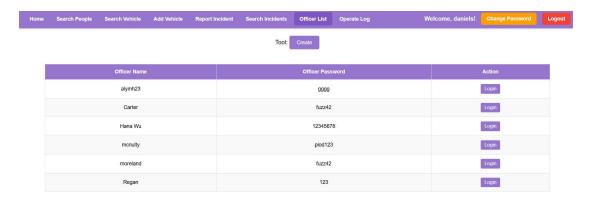

officers don't have that right. This functionality ensures accurate record-keeping and facilitates quick updates to enforcement actions.

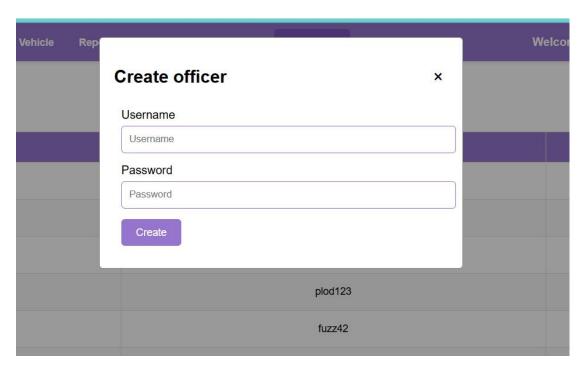

8. Officer Manage

You can click "Create" can create a new officer

9. Operate Log

The operation log view displays the system's operation logs, including the officer's name (Officer Name), specific operation description (Description), and the time of operation (Time). Users can filter the log records by entering the officer's name in the search bar at the top, enabling quick access to specific officer's activity details, such as logging in or querying vehicle or personnel information.
